FLOWERS & VEGETABLES for 1917 - SPRINGTIME

Cosmos Double Crowned and Crested

We consider this one of the best flower novelties of recent years. An entirely new race of Cosmos.

The colors are similar to those of the old type, pink, white, and crimson in mixture, and the habit of the plant is good, being very vigorous, they come into flower about same time as the Late Flowering Mammoth.

Per pkt, 25 cts.

New Strain of "Curled and Crested" Double Zinnias

This Strain comes almost entirely true from seed. The petals are long, elegantly twisted and curled, giving the flower a most attractive, crested-like appearance, somewhat resembling a fine petaled Cactus Dahlia in shape. The plants grow eighteen inches in height by two to two and one-half feet in diameter and bloom freely until killed by hard frost. The colors range from white through many shades of yellow, rose-pink and salmon to deepest crimson. As now improved this is really a first-class and highly decorative novelty.

Pkt. 10 cts.; 3 pkts. for 25 cts.

Lilium Tenuifolium.

Bermuda Easter Lily.

Kept in "cold storage" until sent out by me.

MULTIFLORA, a special variety that blooms more freely than the common kind. These bulbs ripen so early in the fall they become worthless for planting in spring unless they are in cold storage until used. My bulbs are all treated in this way. These bulbs potted make fine plants for Easter and early spring blooming. They bloom magnificently planted outside. Fine for cutting at all times. These bulbs are kept especially for winter and spring sale and will produce 5 to 8 flowers.

Bulbs, 10c. each; 2 for 18c.; 8 for 65c.; large bulbs, 15c. ea.

Lilium Auratum—Golden Banded Lily

It is delightfully perfumed reminding one of the Jasmine and lacking the heavy oppressive odor of most Lilies. Blooms out of doors early in July.

The New Red Sunflower

"The plants vary in height from five to eight feet and throw out many side branches. The flowers are very numerous, of good form, usually having large long rays and small discs. The heads vary greatly in size—some are only two or three inches across while others are a foot or more. The color varies greatly—some plants produce flowers of a rich chestnut red, others red flowers tipped with yellow, others washed with red. This variety in size and color makes a hedge or border of this annual especially interesting and attractive. Some few seeds will produce plants bearing yellow flowers, for, though the seeds came from carefully selected stock, they were grown in a region where yellow sunflowers abound and the wild bees, doubtless, have crossed some with pollen from the wild yellows. The plants likely to produce yellow flowers have no purple in stem or leaf and can be destroyed when seedlings." **Packet, 10c.; 3 packets for 25c.**

Witloof-Chicory, or French Endive

The principal use of *Witloof* is as a winter salad, and it is most delicious served with French dressing and eaten like Cos lettuce. The seed should be sown in the open ground not later than June, in drills twelve to eighteen inches apart, thinning out the plants so that they will stand not closer than three inches. The plant forms long parsnip-shaped roots, and these should be lifted in the fall, cutting off the leaves and then store in soil in a cool place until wanted for forcing. The roots should be planted in a trench sixteen to eighteen inches deep and placed upright about one and a half to two inches apart, which will allow the neck of the root to come within nine inches of the level of the trench. The trench should be filled with a light soil, and if a quicker growth is desired, this can be accomplished by a mulch of fresh manure about two feet deep. It requires about one month to force the roots, and the heads are cut off with a

small portion of the neck of the root attached. **Packet, 10c.; oz., 25c.; 1/4 lb., 50c.; lb., \$2.00.**

Tomato—Chalk's Early Jewel

The largest, smoothest, and finest flavored extra-early bright red Tomato! Within a week to ten days as early as *Sparks'*

Earliana, it is even a heavier cropper, with tomatoes of larger size and sweeter flavor,—produced *continuously* throughout the season.

The plants are of strong robust growth, with ample foliage to protect the fruits from sunscald, and not liable to blight.

The bright scarlet fruits are smoothly round, very deep, and solidly meaty, with only a few quite small seed-cells

and of remarkably fine sweet flavor. **Per Packet, 10c.; 3 for 25c.**

Kale, or Borecole

This is a popular boiling-green for fall, winter, and early spring use, resembling cabbage in flavor. The plant is entirely hardy in well-drained soil and can be grown easily from seed planted during the summer and fall months. The plants are usually cut off for use when the leaves are six inches or more in length, but with the fine curled varieties the leaves can be gathered for use when of good size. With the *Tall Scotch* and other large-leaved varieties it is customary to pull off the lower leaves and let the plant grow on to furnish a continuous supply. The sweetness and flavor of these greens are improved by freezing weather. One ounce should produce four thousand plants. **Packet, 10c.; oz., 20c.; 1/4 lb., 50c.**

New Bohemian Horse Radish

It is a much more rapid grower than the old variety and is ready for use a great deal earlier. Its large white roots are produced in almost any soil and can be very easily raised. Plant the roots in rows and the large roots may be dug or plowed up like potatoes.

The quality of this Horse Radish is of the very best, and it is in all respects a decided improvement on the old variety.

Set or Roots, 6 for 25c., postpaid; per doz., 40c.; 50 for \$1.00.

Cress—Water

This can be grown in any moist place. **Packet, 10c.**

Leeks

The Leek is a very hardy plant with a sweet onion-like flavor. It does not make bulbs, but the plant has a long thick neck somewhat resembling the young growth of the onion in the spring. These necks or stems are blanched in the fall by drawing the earth up about them as the plants increase in growth; or they may be taken up and set in trenches in the same manner as celery for blanching. The flavor is greatly improved by freezing, and the large stems can be kept in excellent condition until well on in the spring. One ounce will plant 100 feet of row. **Packet 10 cts.**

Thyme (*Thymus vulgaris*). The leaves are used for seasoning; a tea is also made for nervous headache. **Per pkt. 10 cts.; oz. 40 cts.; 1/4 lb. \$1.25.**
